

D&A Super Store (US)

Sales dashboard

Executive Summary

D&A Super Store Sales Dashboard offers a highly accurate, multi-page business intelligence tool tracking long-term retail operations. The dashboard successfully aggregates data across five major high-level KPIs: \$1.57M in Total Sales, \$175.26K in Total Profit, 22K in Total Quantity Sold, an Average Order Value (AOV) of \$70, and a rapid Average Shipping time of 4 days.

By analyzing behavioral segments, operational fulfillment metrics, geographic distributions, and integrating a dedicated 10-day time-series forecasting engine, this dashboard provides a comprehensive look at historical performance while accurately projecting future store demand.

The 30-Second Briefing

- **The Big Picture:** We've generated **\$1.57M in sales** with a healthy **11% profit margin (\$175.26K)**. However, our **average shipping time is sitting at 4 days**, largely because **60% of our volume relies on Standard Class shipping**. If we optimize this logistics bottleneck, we can dramatically improve customer satisfaction and lifetime value.
- **Where to Focus:** Cash on Delivery (COD) is dominating at **43% of our payment mix**, and the **Consumer segment is driving nearly half of our revenue (48%)**. Geographically, the **West and East regions make up over 60% of our market**, anchored heavily by California and New York.
- **The Action Plan:** Moving into next quarter, we should incentivize online/card payments to reduce COD friction, run targeted promotions on our high-performing technology and furniture categories, and explore premium shipping incentives for our core coastal hubs to capture immediate revenue.

Key Insights & Data Interpretations

- **Year-Over-Year Optimization:** The "Sales by Month" and "Profits by Month" charts show clear operational scale from 2019 to 2020. The 2020 metrics (darker line) show significantly higher peaks over 2019,

especially during massive holiday volume surges in November and December.

- **The Massive Consumer Base:** The storefront leans heavily on individual retail buyers. The Consumer segment brings in nearly half of all business at 48%, dwarf-emphasizing Corporate clients (33%) and Home Office buyers (19%).
- **Logistics & Delivery Efficiency:** Customers heavily favor economic shipping options, with Standard Class driving a massive \$0.91M in sales. Despite this reliance on budget shipping, the store maintains an impressive, fast Average Shipping timeline of just 4 days globally.
- **Inventory Revenue Highlights:** Office Supplies is the top-grossing major category at \$0.64M. However, looking at individual sub-categories, technical and high-value items take the crown—Phones (\$0.20M) and Chairs (\$0.18M) lead the product mix.
- **Geographic Wealth Belts:** The West (33%) and East (29%) are your core regions. On a granular state level, California (\$0.34M) and New York (\$0.19M) serve as your undisputed high-revenue anchor markets.
- **Advanced Sales Forecasting:** Page two tracks a highly volatile daily sales sequence across two years. The lower chart acts as a brilliant, granular zoom-in on the critical Q4-to-Q1 transition period (Nov 2020 through Jan 2021), highlighting the 10-day predictive buffer where sales are projected to experience a post-holiday stabilization.
